## 2.7 Composite Area

### Partially Shaded...
\[
\text{Area}_{\text{region}} = \text{Area}_{\text{shaded}} - \text{Area}_{\text{unshaded}}
\]

### Fully Shaded...
\[
\text{Area}_{\text{region}} = \text{Area}_{\text{shaded}} + \text{Area}_{\text{shaded}}
\]

### Example 1: Find the area of the shaded region.

1. Find the area of the shaded region.

![Shaded Region 1](image1)

\[
\text{Area} = \frac{1}{2} \times 18 \times 4 = 36 \text{ in}^2
\]

2. Find the area of the shaded region. (Round to the tenths)

![Shaded Region 2](image2)

\[
\text{Area} = \pi \times 8^2 = 64\pi \approx 201.1 \text{ m}^2
\]

3. Find the area of the shaded region

![Shaded Region 3](image3)

\[
\text{Area} = \frac{1}{2} \times 6 \times 18 = 54 \text{ yd}^2
\]

4. Find the area of the shaded region

![Shaded Region 4](image4)

\[
\text{Area} = \frac{1}{2} \times 2 \times 11 = 11 \text{ cm}^2
\]

5. Find the area of the figure below comprised of a rectangle and a semicircle.

![Shaded Region 5](image5)

\[
\text{Area} = \text{Area}_{\text{rectangle}} + \frac{1}{2} \pi \times 6^2 = 18 + 18\pi \approx 55.3 \text{ cm}^2
\]

6. Find the area of the figure below comprised of a square and a right triangle.

![Shaded Region 6](image6)

\[
\text{Area} = 12 \times 13 + \frac{1}{2} \times 12 \times 5 = 198 + 30 = 228 \text{ cm}^2
\]
Example 2: Composite figures

1. Find the area and perimeter of the figure below if all line segments meet at right angles. (Figure not drawn to scale)

2. Find the area and perimeter of the figure below if all line segments meet at right angles. (Figure not drawn to scale)

Rotations

For every $90^\circ$ → 1 quadrant over
Switch #’s

1. If $K(-51, 43)$ is rotated $90^\circ$ counterclockwise about the origin, then what would be the coordinates of the new point?

2. If $P(4, -3)$ is rotated $180^\circ$ clockwise about the origin, then what are the coordinates of its image?

3. If $M(5, 6)$ then what are the coordinates of its image after a rotation $90^\circ$ clockwise about the origin?

Translations

1. If $A(-4, 2)$ translates to $A'(3, -9)$, then $B(-1, -5)$ is translated to what point?

2. If $G(3, 5)$ translates to $G'(-5, 12)$, then $K(-4, 1)$ is translated to what point?
